

How we are supporting

Our help we are building on three pillars, which make it possible for you to help concretely and personally:

Education is opportunity

The A and O for sustainable improvement of living conditions of the population is a good education. There are many schools and these are quite well also in the backcountry. But they cost money. With sponsorships for school children here can be quickly achieved a lot with relatively little effort.

Water means life

More and more the lack of clean drinking water for humans and animals becomes a focal point. In the medium term we want to specifically support well construction projects. Vision is to be built in five years, at least two wells.

If nothing else supports...

Basically we want to give primarily with the first two columns to help themselves. The current situation shows that currently often direct support in the form of food, medicines or seeds for the next crop is needed to ensure survival. Therefore should be possible in emergency situations and direct assistance. .

Help us make our vision reality.

Support our projects around Matuu / Kenya.

For more information or for a presentation of our work (eg slide show) we will be happy to help. Please contact

Kenya needs your help

You can help

Who we are?

We are an in November 2009 in Dingolfing / Germany established charitable organisation. We want to support the population in one of the poorest regions of Kenya sustainable. We all work voluntarily, so that donations go directly and without bureaucracy where needed. Our good relations in the region allow a direct and uncomplicated help.

The common situation in Kenya

Who listens Kenya thinks more like Safari or white beaches as drought or famine. This is certainly due to the beautiful landscapes and well-developed tourism industry. But even by African standards, the relatively stable political system with "almost democratic" structures, the Kenya reliable partnership with the U.S. and Germany also play as a military base and starting point for activities in Central Africa a major role for the positive image.

It is, however, forget that 99% of Kenya's population are still desperately poor and live on below \$ 1 per day. Thus, the situation is similar in Kenya as in many other African countries. Corruption and mismanagement make a few people getting richer and the majority of the population lives from subsistence.

These areas also include the area east of the capital Nairobi, where we are supporting directly.

Focus on water supply

Water comes from the tap ?!?

This statement shows how little thought we have to worry about the supply of clean water. Also, only 100 km south of Mount Kenya, this is quite different.

For family Musyoka there is no water transported directly into the house in a pipe, there are no well, where water can be pumped away. The supply of water - that can not almost be called drinking water - takes a very long time every day

The daily fight for water.

Family Musyoka also has some colorful canisters and a donkey, which is by no means self-evident. With this daughter Catherine makes her way to the nearest water point, which is about an hour away. There she has to wait for several hours in some cases because lots of other people are waiting for water. Then it is her turn, she may fill the water in the canister with a small vessel and begin the arduous way home over rocky 200feet of altitude.

August 2009: Women waiting in front of a water hole

The 20 gallons of "water" that would be used with us at most for watering the backyard, must be sufficient for the whole family for a day for drinking, cooking and washing.

Also the entire animal - that is, the few goats, chickens and two cows to be fed with the water.

2009: The exception or in future normality???

The complete failure of the rainy seasons and thus a complete crop failure exacerbate the problem further. Thus, a quick action is essential. The existing in deep layers - high quality water must be made accessible to the population.

August 2009: Dry lake

A well in the village – a dream

A well - and thus clean drinking water in the villages supported by us certainly certainly makes not a paradise yet, but

guaranteeing the existence of many families.

saves time and thus creates room for other economic activities.

protects against disease and the associated consequences
